CREATING

THE FUTURE

Sergey Chemezov

**CEO
of State Corporation Rostec**

Today, many countries in the world, like us, are defending their technological sovereignty, the right to determine their own future. Certainly the main driving force behind this process are engineers, technical specialists who are able to provide leadership in both civil and military spheres. The key task now is to train professionals who are capable to effectively overcome emerging challenges, to think globally, to work in a team and to be able promptly react to emerging changes. Russia has powerful industrial, scientific and educational potential. By offering our partner countries assistance in training national engineering personnel, we thereby contribute to the formation of a united scientific, technical and industrial ecosystem that will ensure breakthrough technological development of our friendly countries.

Oleg Evtushenko

**Executive Director
of State Corporation Rostec**

Russia has unique achievements and experience in many branches of science and production, our technical universities are among the best in the world. This great experience has prompted creation of a single educational space, where engineers from different countries will be able to speak the same professional language. Every country participating in these processes has their own national tasks, but one mutual goal - creation of an engineering class, development of high-tech industries, stimulation of innovation, strengthening of economic and military potential. We are united by a common cause of creating the foundation of a technologically independent multipolar world.

Alexander Mikheev

**Director general
Rosoboronexport, SC**

The arms market is a highly competitive environment that requires competencies in the field of high technology, artificial intelligence, and robotics. Career growth and development of professional skills here depend on the desire to be in the trend of world science.

MOSCOW STATE INSTITUTE OF INTERNATIONAL RELATIONS

MAJORS

The purpose of the master's program is to prepare masters of management of an international profile with knowledge of English and in-depth specialization in the field of military-technical and defense-technological cooperation and high technologies.

The Corporation's organizations, with the assistance of Rostec State Corporation, provide employment for graduate students in holding companies and direct management organizations of the Corporation in the following areas of practical activity:

- corporate governance and development
- forecasting, analysis and long-term planning
- marketing and investment programs
- procurement activities
- organization of advertising and exhibition activities, external relations, protocol, etc.
- sales organization, registration of foreign economic transactions, support of after-sales service transactions

IVANOVO STATE POWER ENGINEERING UNIVERSITY NAMED AFTER V.I. LENIN

MAJORS

- Mechatronics and robotics
- Mechanics and mathematical modeling
- Computer Science and Engineering
- Thermal power engineering and heat engineering
- Automation of technological processes and productions
- Electric power and electrical engineering
- Energy engineering
- Thermal power engineering and heat engineering
- Nuclear, thermal and renewable energy and related technologies
- Design and technological support of machine-building industries
- Nuclear power plants - design, operation and engineering
- Management in technical systems

IZHEVSK STATE TECHNICAL UNIVERSITY NAMED AFTER M.T. KALASHNIKOV

MAJORS

- Heat and gas supply, ventilation
- Development of software and information systems
- Design and technology of electronic means
- Design and technology of radio-electronic devices
- Infocommunication technologies in radio engineering and communications
- Laser technology and laser technology
- Electrical equipment, electrical facilities of enterprises, organizations and institutions
- Industrial thermal power engineering
- Power plants, aggregates and combined engines
- Machines and technology of metal processing by pressure
- Welding production equipment and technology
- Small arms and cannon armament
- Rocket science
- Operation of unmanned aircraft systems

Your choice is ROSTEC. Opportunities to be ahead of the curve

KAZAN NATIONAL RESEARCH TECHNICAL UNIVERSITY NAMED AFTER A. N. TUPOLEV

MAJORS

- Steam and gas turbine installations.
- Car engines
- Automation and digitalization of machine-building production
- Technologies for the production of aerospace and unmanned vehicles
- Aircraft industry
- Aircraft engines
- Shipbuilding
- Rocket engines
- Aircraft and helicopter construction
- Optoelectronic systems
- Electronics and microsystem engineering
